

I'm not robot!

Peofessoe Popov's book on the theory of servomechanisms and control systems will be of interest to English readers in showing the meticulous detail into which Russian engineers and students are led when discussing these subjects. A few standard and useful examples are taken and form the basis for discussion at all levels, from the most elementary to the most complete and advanced, so that a sense of continuity is preserved throughout the volume. The translation preserves much of the Russian sentence structure and the editor did not find it possible to alter this without a more or less complete rewriting of the translator's manuscript. Nevertheless, it is hoped that a readable result has been obtained and that the spirit of the whole is faithful to that of the original. The wide study of the theory of automatic control in our institutions of higher education is a very recent development. Many engineers therefore have come to study it only when already engaged in practical work. The present book has the aim of assisting these broad circles of engineers and students to acquaint themselves in the most accessible form with the foundations of the theory of automatic control, in which the main role is played by the dynamics of control systems. Following the aim of the most accessible development, the author has consciously tried to reduce to a minimum the use of operational calculus and the theory of functions of the complex variable and everywhere, where possible, to confine himself to the use of the symbolic operational method as a means of simplifying the notation and manipulation of differential equations. The book presents those theoretical methods of analysis and synthesis of automatic control systems common to systems of various physical natures and designs. The concrete examples presented in the book, therefore, by no means pretend to reproduce the designs of contemporary automatic control systems. They will be only the simplest functional circuits serving to illustrate the principal ideas in the construction of automatic control systems and the application of the theoretical methods developed here. By analogy, the reader may then apply these ideas and methods to the concrete automatic control systems of interest to him. Attempting to describe in detail the fundamental results of the theory of automatic control, the author has been forced to limit himself to brief remarks on a number of special questions. Statistical methods and questions of representation of automatic control systems have been completely neglected here. Each of these important fields is so specialised that it may constitute the subject of separate books. © 1996-2014, Amazon.com, Inc. or its affiliates. The following two types of contributions are regularly considered. Presentation of significant research, development, or application of control concepts. Brief technical notes, comments on established control topics, corrections to papers and notes published in the Transactions. In addition, special papers (tutorials, surveys, and perspectives on the theory and applications of control systems topics) are solicited. Authors are urged to contact the Editor-in-Chief before submitting such papers. Submitted manuscripts must be typewritten in English. All submitted manuscripts should be as concise as possible. We require a double-column version for both Full Papers and Technical Notes at the time of submission. The standard Full Paper is 12 pages, (including bios and photos), but authors are allowed 4 extra pages over the 12 pages for Full Papers, with a \$125.00 fee for each extra page. The standard Technical Note is 6 pages, but authors are allowed 2 extra pages over the 6 pages for Technical Notes, with a \$125.00 fee for each extra page. Authors are asked to submit a single-column, double-spaced version of their paper as well, under Supplementary material. Note that the single-column format is requested on behalf of the reviewers for ease of reviewing. Full Papers of length exceeding 16 pages, 2-column, single-spaced, typed pages (including figures) will not be considered. Technical Notes and Correspondence of length exceeding 8 pages, 2-column, or single-spaced format will not be considered. Submission of a manuscript signifies that it has been neither copyrighted, published, nor submitted or accepted for publication elsewhere. Special Notice for Authors. Authors of articles reporting on research involving human subjects or animals shall confirm upon submission of an article to the Editor* whether or not an approval was obtained from a relevant Review Board. If such approval was obtained, the original source and reference shall be provided to the Editor* at the time of submission and shall appear in the article.
